vidhyasendurpandi@gmail.com

Thoothukudi district-Tamil Nadu (628502)

SKILLS

Core Manufacturing Skills

- Manufacturing Process (machining, casting,assembly ,heat treatment - basics)
- SOP and work instruction awareness
- Hydraulics & pneumatics (basics)

Automation & Tools

- Industrial automation basics
- Sensors and actuators
- SolidWorks (Basic), MS Excel

Lean & Quality

- Lean manufacturing (5S, Kaizen)

LANGUAGES

- English
- Tamil
- Japanese (learning)

INTEREST

- Manufacturing Systems
- Industrial automation
- Production Systems

CO-CURRICULAR ACTIVITIES

NCC (A,B - certificate)

Volunteer - Limca Book of Records (seedball rolling event)

PROFILE

Mechatronics engineering student with strong interest in manufacturing systems, industrial automation, and lean practices. Seeking an entry-level opportunity to gain hands-on experience and contribute to continuous improvement initiatives.

EDUCATION

BANNARI AMMAN INSTITUTE OF TECHNOLOGY 2023 - 2027

- B.E - Mechatronics Engineering
- CGPA - 7.9 (Semester-5)

GOVERNMENT GIRLS HIGHER SECONDARY SCHOOL 2016 - 2023

- 12TH- 80%

PROJECT

- **Automated fish feeding with water quality monitoring**

  The automated fish feeding system with water quality monitoring uses IoT sensors to continuously track parameters such as temperature, pH, dissolved oxygen, and turbidity in aquaculture tanks or ponds. A microcontroller processes the sensor data, and Python is used to implement the automation logic, control feeding schedules, and provide real-time monitoring. The system activates an automatic feeder using servo motors and can send alerts to the user. if water conditions become unfavorable. This integration of sensors, automation, and Python programming ensures optimal fish growth, reduces feed wastage, and allows remote monitoring and data analysis.

- **Line follower bot**

  The Line Follower Bot is an autonomous robot designed to follow a predefined path using sensors. It uses infrared (IR) sensors to detect the track and a microcontroller to process the signals. Motors are controlled to adjust the robot's direction and speed, ensuring it stays on the line. C programming can be used for logic implementation and calibration. This robot demonstrates precision, speed, and obstacle handling for competitive performance in the Yugam event.

- **Full stack project - Smart Aquaculture Monitoring Dashboard**
